As always, IDC4 software releases also make new software functions available. In particular, a new printing possibility was developed for AXONE 4 through the "AXPRINTER" mode, that takes advantage of printers configured on other PCs that belong to the same computer network in which AXONE 4 is configured.

OPTIMISED TGS 2 FUNCTION

Now you may choose between 2 different scan levels:

Standard: it allows you to scan all the systems following "traditional" times.

Optimised: it allows you to reduce the scan times of electronic system on the vehicles it is provided for.

The developments introduced in this version are many and they help your TEXA device gain better performances and become well documented both in terms of vehicles that may be diagnosed and in terms of technical information available. The new complete diagnosis features, included the database update, are available in the DOCUMENTATION menu that you may find directly in the IDC4 software.

Continue to work with TEXA!
